AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application:

- 1. (Currently Amended) A format for optical testing of a sample comprising:
- a first format member comprising a first inner surface and a platform extending a distance from said inner surface;
- a second format member comprising a second inner surface and a well disposed within said second inner surface, said well being shaped to accept said platform of said first format member within said well, said well and said platform defining a sample testing region;
- a sample fill nose disposed within said second format member and extending from a sample collection opening at a first end of said sample fill nose to intersect with said well at a second end of said sample fill nose; and
- a vent disposed within said second format member and extending along said second inner surface from a vent opening at a first end of said vent to intersect with said well at a second end of said vent.

wherein said sample fill nose has a sample fill nose cross-section and said vent has a vent cross-section different from said sample fill nose cross-section such that said vent is configured to receive sample overfill from said sample testing region.

- 2-3. (Cancelled).
- 4. (Previously Presented) The format of claim 1 wherein said vent intersects with said well at an area approximately opposing an intersection of said sample fill nose with said well.
- 5. (Currently Amended) The format of claim 1 wherein said platform extends from said first inner surface to a platform height and wherein said well extends within said second format member to a well depth greater than said platform height, thereby forming a further defining said sample testing region for accepting said sample.

- Application No. 10/576,993
- 6. (Original) The format of claim 1 wherein said platform is provided with a reagent thereon for reacting with said sample.
- 7. (Original) The format of claim 5 wherein said sample testing region has a sample testing region volume and further comprising a fill nose disposed within said second format member and extending from a sample collection opening at a first end to said sample testing region at a second end, said fill nose having a fill nose volume greater than said sample testing region volume, thereby ensuring that sufficient sample volume is available to fill the sample testing region.
 - 8. (Currently Amended) A format for optical testing of a sample comprising:
 - a first format member comprising a first inner surface and a platform extending to a platform height from said inner surface;
 - a second format member comprising a second inner surface and a well disposed within said second inner surface and extending a well depth below said second inner surface, said well being shaped to accept said platform of said first format member within said well thereby forming a sample testing region;
 - a sample fill nose extending from a sample collection opening at a first end of said sample fill nose to said well at a second end of said sample fill nose; and
 - a vent extending from a vent opening at a first end of said vent to said well at a second end of said vent,
 - wherein said sample fill nose has a sample fill nose cross-section and said vent has a vent cross-section different from said sample fill nose cross-section such that said vent is configured to receive sample overfill from said sample testing region.
- 9. (Original) The format of claim 8 wherein said platform is cylindrical and has a platform diameter and said well is cylindrical and has a well diameter greater than said platform diameter.

- 10. (Original) The format of claim 8 wherein said sample fill nose is adapted to transport a volume of said sample from said sample collection opening to said sample testing region via capillary action.
- 11. (Previously Presented) The format of claim 10 wherein said volume of said sample is approximately 50 nl.
- 12. (Previously Presented) The format of claim 10 wherein said volume of said sample is within the range of from approximately 5 nl to approximately 1000 nl.
- 13. (Original) The format of claim 9 wherein said vent opening is provided on an opposite side of said format from said sample collection opening.
 - 14. (Cancelled).
- 15. (Currently Amended) A method of manufacturing a format for optical testing, the method comprising the acts of:

providing a first format member comprising a first inner surface and a platform extending to a platform height above said first inner surface;

providing a second format member comprising:

- a) a second inner surface and a well disposed within said second inner surface and extending to a well depth below said second inner surface, said well depth being greater than said platform height;
- b) a sample fill nose notch having a first width, said sample fill nose notch terminating at said well; and
- c) a vent notch having a second width different than said first width, said vent notch terminating at said well; and

joining said first format member to said second format member by inserting said platform of said first format member into said well of said second format member, thereby forming a sample testing region, wherein said vent notch is configured to receive sample overfill from said sample testing region.

- 16. (Original) The method of claim 15 further comprising applying a testing reagent to said platform.
- 17. (Original) The method of claim 15 wherein said sample fill nose notch approximately opposes said vent notch across said well.
- 18. (Original) The method of claim 15 further comprising providing adhesive on one or both of said first and second format members.
- 19. (Original) The method of claim 15 wherein said vent notch has a rectangular cross-section.
- 20. (Original) The method of claim 15 wherein said fill nose notch has a rectangular cross-section.
 - 21. (Currently Amended) A format for optical testing of a sample comprising:
- a first format member comprising a first inner surface and a platform extending a distance from said inner surface, said platform further extending in a direction substantially perpendicular to said inner surface; and

a second format member comprising a second inner surface and a well disposed within said second inner surface, said well being shaped to accept said platform of said first format member within said well, said well and said platform defining a sample testing region configured to receive a predetermined sample volume; and

a sample fill nose disposed within said second format member and extending from a sample collection opening at a first end of said sample fill nose to intersect with said well at a second end of said sample fill nose,

wherein said sample fill nose has an open volume approximately equal to said predetermined sample volume.

22. (Previously Presented) The format of claim 1 wherein said vent cross-section has a first area and said sample fill nose cross-section has a second area, said first area is greater than said second area.

- Application No. 10/576,993
- 23. (Previously Presented) The format of claim 10 wherein said vent cross-section has a first area and said sample fill nose cross-section has a second area, said first area is greater than said second area.
- 24. (Previously Presented) The method of claim 15 wherein said first width is greater than said second width.
- 25. (Previously Presented) The format of claim 1 wherein said platform extends in a direction substantially perpendicular to said inner surface.
